

Communicating European Health Research

CommHERE will improve communication on the outcome of EU-funded health research projects to the media, the general public and other target groups including the EC in all of Europe and beyond.

Ask European citizens what is most important in life, and 'health' will top their list. That's why the European Union is one of the biggest financers of health research in the world. EU funds bring researchers together in joint projects which address the great challenges in health of today and tomorrow.

You're a European citizen? Then you want...

- to learn more about Europe's latest advances in the area of medicine and health.
- to exploit the societal benefits of EU-funded health research and how it impacts your life.
- transparency in the use of taxpayers' money and the funding of health research.

You're a journalist? Then you want...

- accurate and up-to-date information on EU-funded health research.
- the possibility to engage with Europe's networks of science – the performers of research.

You're a researcher? Then you want...

- enhanced exposure of your project among the general public and in the media.
- tools and guidelines which helps you to communicate your project and its results beyond the scientific community. A responsibility and long-term investment for researchers!
- hands-on support and feedback on science communication issues.

CommHERE puts Europeans directly in touch with top level health research

Our main objectives

1. Develop new and existing methods, measures, tools and guidelines for communication on EU-funded research results through press, web, virtual media and outreach activities.
2. Implement communication measures in EU-funded research projects on a local, national and European level.
3. Support, encourage, motivate and educate project coordinators in communication skills.

What we do

- Establish science communication networks on a local, national and European level.
- Develop tools and guidelines for successful science communication across national borders.
- Build a web portal to communicate the outcomes of European health research to the public.
- Perform outreach activities which engage the public in EU-funded health research.
