NATIONAL PRESS RELEASE | PARIS | 20 FEBRUARY 2017

French institutions back the March for Science

On April 22, Earth Day 2017, the citizens of the world are invited to participate in a massive “March for Science.” The initiative was launched by US scientists in response to “*new policies [that] threaten to further restrict scientists’ ability to carry out research and communicate their findings.*”

As directors of public research institutions, we uphold the idea that “*Science is a process, not a product — a tool for discovery that allows us to constantly expand and refine our knowledge of the Universe.*” We too face the problem of working with restricted budgets, and share the organizers’ conviction that “*de-funding and hiring freezes in the sciences are against any country’s best interests.*”

For these reasons, we fully support the initiative of this public-spirited march for the sciences.

Jean Chambaz, President of CURIF (Coordination of French Research-Intensive Universities)

Alain Fuchs, President of CNRS

Yves Lévy, CEO of INSERM

Philippe Mauguin, CEO of INRA

Antoine Petit, Managing Director of INRIA

Daniel Verwaerde, Chairman of the CEA
